

Every day, organizations around the world put their trust in Kofax Transformation Modules to streamline their business critical processes. Typical applications include:

Invoice Processing and Accounts Payable Automation - extract all invoice information, including line items, enabling automatic booking of invoices in the world's leading ERP systems, including SAP, Oracle Financials and JD Edwards.

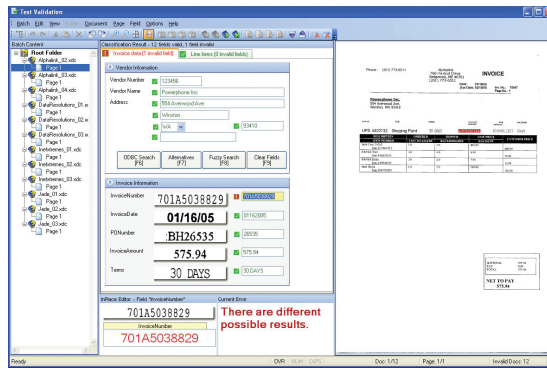

Sales Order Processing - extract order data from scanned and faxed POs and validate against catalogue databases using fault tolerant fuzzy matching, reducing the order to cash cycle, and providing automatic confirmation of order receipt.

Workflow/Mailroom Automation - classify all incoming documents, including forms and customer correspondence, at an enterprise or departmental level and route them automatically to the correct queues, improving customer service and retention.

Forms Processing - extract customer data from application forms, claim forms, loan documents etc, reducing delays and improving the customer experience.

Leverage the Power of Kofax Capture

Kofax Transformation Modules integrate seamlessly with Kofax Capture, adding powerful classification and extraction capabilities to the world's leading data and document capture platform. Server applications automatically classify and extract information from each document quickly and accurately. Interactive keying and verification applications allow users to review the documents and information prior to release into workflow, storage or line-of-business applications. Powerful data validation ensures that data is correct before it is used by the business.

Ergonomic Data Validation

Improve Your ROI and Productivity While You Work - With Powerful On-line Learning

Kofax Transformation Modules feature powerful learn-by-example technologies that are quick and easy to reconfigure. As documents are processed in a production environment, users can 'teach' the system to process new or rejected documents themselves - no IT skills are required. The result is more documents processed automatically, leading to even greater cost and time savings.

Achieve the Highest Levels of Productivity - with Ergonomic Data Validation

Easy to use and efficient data validation is vital for maintaining productivity in a transformation environment - poor validation design can cancel out the benefits of automated classification and extraction. Kofax Transformation Modules include keying applications that are highly customizable, either at design time through an easy drag-and-drop interface or at runtime through an extensive set of script events. Screen navigation and image manipulation are logical and easy to use.
